

## Global Coal-fired Capacity is Expected to Increase by 700,000 MW in 10 yrs

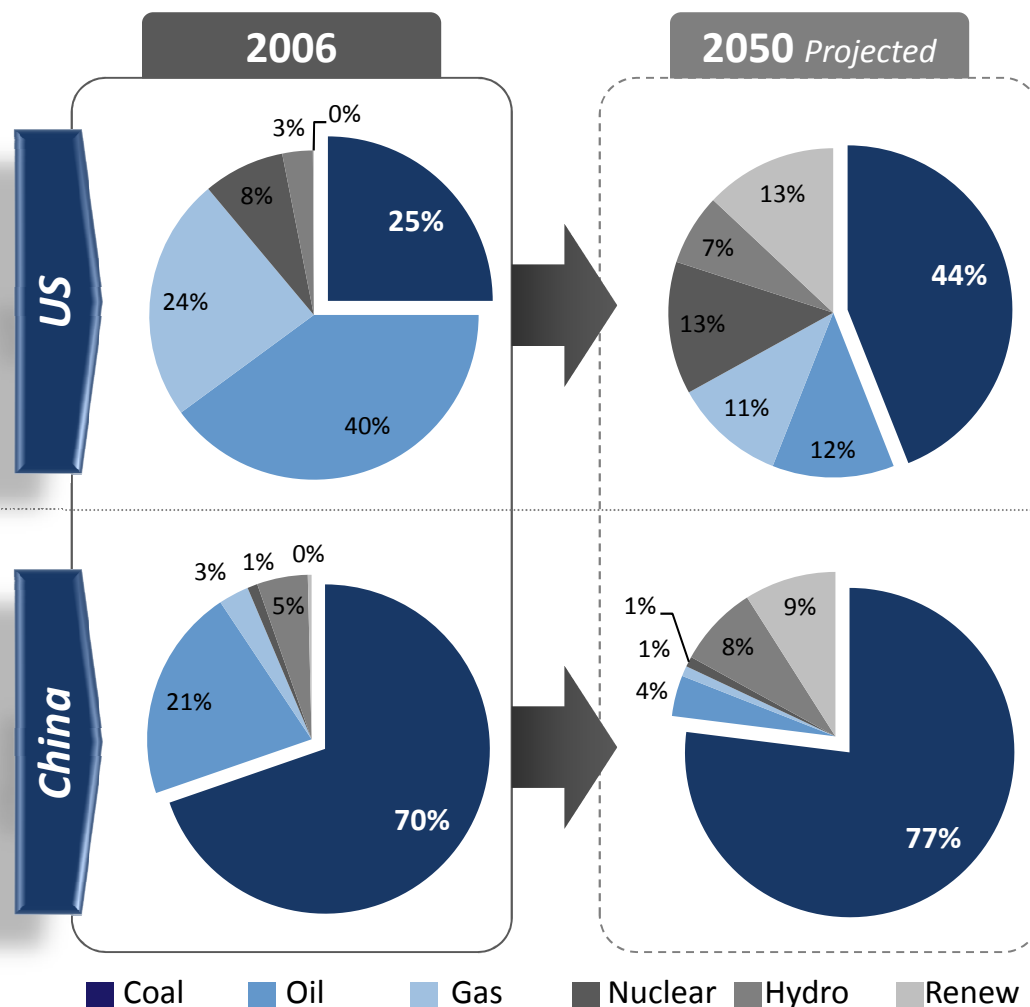

- 3,500+ U.S. fossil-fueled power plants producing 850,000 MW or 77% of total US capacity

→ 16,000 (50% coal & oil) fossil fuel power plants in US & EU.

- China has over 700,000 MW of coal-fired capacity

→ Double that of US and 40% of world coal-fired capacity.

→ China is opening a 1,200 MW coal-fired power plant/week.
